DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 05, 2004 has been entered.

Accordingly, claims 1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25, 27, 29, 31, 33 and 35 were amended, claims 2, 4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34 and 36 were cancelled, and new claims 37 and 38 were added. Currently, claims 1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37 and 38 are pending in this application.

Allowable Subject Matter

2. Claims 1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37 and 38 are allowed.

The following is an examiner's statement of reasons for allowance: none of the prior art of record fairly suggests or shows all of the limitations as claimed. Specifically,

Re claim 1, none of the prior art of record discloses, in combination with other limitations as claimed, a pattern electrode isolated formed within a surrounding

electrode with a small gap therebetween, wherein said small gap is made small in width so that scattering at said small gap is inconspicuous when most of display region becomes transparent by applying voltage between said signal electrode and said counter electrode.

The most relevant references, USPN 4,299,462 of Suzuki et al. and USPN 6,002,887 of Chiba et al., fail to disclose or suggest a gap formed between the pattern electrode and the surrounding electrode, which is made small so that scattering at said gap is inconspicuous when most of display region becomes transparent by applying voltage between signal electrode and counter electrode. The Suzuki et al.'s reference only discloses a viewfinder having a pattern electrode 25T formed within a surrounding electrode 11T as shown in Fig. 9(c). Meanwhile, the reference of Chiba et al. only discloses a viewfinder having transparent display region when voltage is applied to electrodes 2a, 2b as shown in Fig. 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
